#### Chapter 3 Multivariate Nonparametric Regression

els In this chapter, we provide a brief overview of some multivariate nonparametric methods, such as regression trees and splines, and we describe how those methods are related to traditional linear models Variable selection (discussed in Chapter 2) is a critical ingredient of the nonparametric regression methods discussed here; be-

#### Nonparametric Statistical Methods Using R - Pindex

Nonparametric Statistical Methods Using R covers traditional nonparametric methods and rank-based analyses, including estimation and inference for models ranging from simple location models to general linear and nonlinear models for uncorrelated and correlated responses The authors emphasize applications and statistical computation

ARMY RESEARCH LABORATORY

Nonparametric methods for multivariate analysis have been pursued, notably by Puni and Sen (1971), but their more complete development awaits further research This report considers multivariate hypothesis testing in both one-sample and two-sample situations Comparable univariate procedures do not extend readily to higher dimensions
